

# Canine Forelimb Arthroscopy and Stabilization Course

For the Advanced Surgeon, *Hosted by Arthrex Vet Systems*

A focused course on canine shoulder and elbow arthroscopy with a combination of short, cutting-edge lectures and wet lab sessions spread over 2 days.

Lectures will cover forelimb arthroscopy instrumentation, maximizing visualization, manipulation and debridement of elbow and shoulder structures, and examination and treatment pathology. Participants will perform the described techniques on cadaveric forelimbs and will be instructed and guided through the techniques by 3 experienced and proficient forelimb arthroscopists to ensure technique understanding.
